FOR IMMEDIATE RELEASE

Sorna Corporation to Release Vertex ® 3.4

EAGAN, MN – June 6, 2016 – Sorna Corporation has released the 4th version of the highly regarded Vertex® software. Version 3.4 includes many enhancements in job data composition, video DICOMization support, usability and job history/query.

"We are dedicated to continuously improving Vertex and this version is full of enhancements. One exciting new feature is the 3rd party integration with ClickOnce deployed workstations which enables users to launch straight into Vertex workflows. Users can create templates for PHI then attach scanned documents, various files and export data sets as DICOM objects to multiple destinations. Vertex is launched with the selected PHI directly from a PACS client so the user won't have to search for patients in multiple applications, saving time." – James Rosenwald, Integration and Regulatory Manager.

For current users, please contact your sales representative to receive a full list of features. Inquiries can be sent to sales@sorna.com.

ABOUT SORNA CORPORATION

For over fifteen years, Sorna has developed groundbreaking solutions that simplify the distribution and management of medical studies for healthcare professionals. Since its founding in 1999, Sorna has offered an evolving suite of software and CD / DVD burning systems that have improved the medical information sharing workflows of thousands of healthcare facilities worldwide. History has proven Sorna's commitment to delivering industry-leading, first-of-their-kind products that support their motto: Harmony. Innovation. Simplicity.
