Enable patients and providers to securely upload images and documents

Vertex Upload is a cloud-brokered solution for patients and providers to securely send medical data - No account set up and no cloud storage. Email a link and a separate Access Code to have data securely uploaded to your on-site Vertex Inbox.

Cost-Effective
Designed for any sized facility, Vertex Upload offers affordable pricing; you only pay for what is actually uploaded by the users

No Cloud Storage
The uploaded data is stored locally, eliminating the security risk and cost associated with cloud storage.

Flexible Upload
Collate, package, and upload DICOM studies, paper, film, office documents, visible light images, videos, and other digital content.

Customizable Workflow
Once an upload is received, users can process and send data to various destinations using the Vertex Platform.

Easy to Upload
Selected recipients each receive a secure email and access code simultaneously. No recipient account set-up is needed.

On Demand Data Upload
Data is uploaded on-demand and received locally. Cloud streaming minimizes upload bandwidth, eliminates cloud storage costs, and significantly reduces security risks.

IT Friendly
Vertex Upload utilizes outbound connections only. It maintains a complete, searchable activity history. Know when, what, and whose data has been uploaded.

Contactless Image Sharing
Upload data in advance to avoid non-essential patient visits. Eliminate passing around a physical medium potentially increasing contamination risk

Total Security
Data in transit is always encrypted. Network transport utilizes TLS v1.2. Static data encrypted with AES-CBC 256bit.
