Sorna Announces VA Medical Center Orders for eXpedo DICOM CD/DVD Publishing Systems

Eagan, MN., November 1, 2007 -- Sorna Corporation, industry leader in the development of workflow intelligent DICOM CD/DVD recording systems, announces that multiple orders for eXpedo™ publishing systems were received from Veteran Affairs Medical Centers (VAMC) located in six states. The eXpedo publishing systems will be integrated with existing VistA Imaging image and document management systems in VAMC facilities located in Arizona, Missouri, New Mexico, South Carolina, Texas and Washington.

VistA Imaging integrates clinical images (including radiology, cardiology, dermatology, endoscopy, and pathology), scanned documents, and other non-textural data (such as EKG waveforms) into a patient's electronic records. Sorna's customizable eXpedo systems automate the production process for DICOM and IHE PDI Media profile conformant CDs and DVDs for any of this data. Sorna's FDA-approved DICOM viewer is automatically burned into each DICOM DISC. CDs for patients own personal health files containing non-diagnostic compressed JPEG images for easy PC viewing can also be made.

"Sorna offers the largest selection of DICOM CD/DVD publishing systems for medical applications of any manufacturer," said Cyrus Samari, Vice President of Sales and Marketing. "Healthcare facilities have unique DISC burning requirements, and by providing a wide variety of hardware to meet low-to-high volume production needs, all utilizing eXpedo software, our customers can purchase exactly what they require."

eXpedo software has been designed by Sorna to simplify DISC production workflow through its intelligent and customizable functionality to match individual facility and enterprise institution requirements, no matter how simple or complex. eXpedo's DISCflow™ profiles define and automate the process of creating routine and custom diagnostic, patient and academic/research CD and DVD production, no matter how diverse and complex the requirements of the user.

About Sorna Corporation

Sorna is a privately held, minority-owned corporation founded in October 1999 with headquarters in Eagan, MN. Sorna pioneered the use of 100% DICOM 3.0 compatible and IHE Media Profile conformant automated CD/DVD systems to provide an alternative to the use of film production for distribution and storage of radiology examinations. In addition to offering the largest available selection of workflow-optimized DICOM DISC publishing systems for medical imaging, its products include DICOM DISC importing, printing and economic archiving for multi-hospital networks to physician private practices.
