## **For Immediate Release**

**(Eagan, MN) June 23, 2011** - Sorna Corporation, a global leader in digital medical image and data distribution systems, announced today that the United States Patent and Trade Office has awarded it US Patent 7,965,408 dated June 21, 2011.

This patent relates to Sorna's automated medical data production technology currently used in Sorna's eXpedo and Reviewer systems. This patent details a medical data recording method where medical data is received, parsed, and recorded on a recording media and automatically labeled with patient and study information as well as any optional logos. It further details a method for storing and backing up the medical data on a recording media.

"After a lengthy application process with the USPTO, our groundbreaking inventions and early leadership were finally recognized," said Cyrus Samari, Vice President of Sales and Marketing. "We consider this patent to be a very valuable asset of Sorna and will protect our intellectual property rights as well as pursue available licensing opportunities. Sorna has always been dedicated to bringing innovations to the medical industry and will continue to do so."

Sorna has two other patent applications (12/212,523 and 12/265,331) pending in this field of technology.

### **About Sorna Corporation**

Headquartered in Eagan, Minnesota, Sorna is a privately-held corporation founded in October 1999. It designs and manufactures DICOM and IHE conformant products designed to facilitate the viewing, importing, storing, converting, distributing and sharing of DICOM images and related medical data. Sorna's products include eXpedo DICOM CD/DVD publishing systems as well as the Reviewer software suite ranging from a free DICOM CD viewer, to CD importing, drag & drop DICOMization, EMR-enabled viewing, and administrative tools.
