

### Enable patients and providers to securely upload images and documents.

Vertex Upload is a cloud-brokered solution for patients and providers to securely send medical data - No account set up and no cloud storage. Email a link and a separate Access Code to have data securely uploaded to your on-site Vertex Inbox.

#### Cost-Effective

Designed for any sized facility, Vertex Upload offers affordable pricing; you only pay for what is actually uploaded by the users

#### No Cloud Storage

The uploaded data is stored locally, eliminating the security risk and cost associated with cloud storage.

#### Flexible Upload

Collate, package, and upload DICOM studies, paper, film, office documents, visible light images, and other digital content.

#### Customizable Workflow

Once an upload is received, users can process and send data to various destinations using the Vertex Platform.

#### Easy to Upload

Selected recipients each receive a secure email and access code simultaneously. No recipient account set-up is needed.

#### On Demand Data Upload

Data is uploaded on-demand and received locally. Cloud streaming minimizes upload bandwidth, eliminates cloud storage costs, and significantly reduces security risks.

#### IT Friendly

Vertex Upload utilizes outbound connections only. It maintains a complete, searchable activity history. Know when, what, and whose data has been uploaded.

#### Contactless Image Sharing

Upload data in advance to avoid non-essential patient visits. Eliminate passing around a physical medium potentially increasing contamination risk

#### Total Security

Data in transit is always encrypted. Network transport utilizes TLS v1.2. Static data encrypted with AES-CBC 256bit.
